Summary of Meeting:

Contact CSA for more details on this meeting.

In June 2022, the Outdoor cooking CSA technical subcommittee (TSC) that maintains ANSI Z21.89 / CSA 1.18 *Outdoor Specialty Gas Appliances* standard formed a task force to discuss adding requirements for smart enabled features in ANSI Z21.89. This was the second meeting of the task force. CPSC staff actively participated in the meeting discussions.

The task force discussed and agreed, with CPSC staff support, to the following items for outdoor specialty cooking appliances:

- The proposed requirements should align with Z21.58 Annex B and the new Z21.1 Annex H.
- Using Z21.58 Annex B as a baseline, only B.3.4 would change with update from Z21.1 Annex H.
- Fryers should have a loss of communication times less than what is in Z21.58. Smokers may be okay to have a loss of communication times more than what is in Z21.58. All other specific appliances should have the same loss of communication times as what is in Z21.58
- For the next meeting on September 23 the task force will decide on loss of communication times, verify if all other specific appliances should match Z21.58, and review the marking requirements in B.5.1.
- The draft should be ready by the end of November.

The next meeting is scheduled for Friday September 23, 2022, from 1pm to 3pm ET.
